Lillium Natural series
AntiBacterial

There is no place for microbes!

We care about your health!

Advanced technology solutions for residential and public buildings!

MAKEL[®]

**Do not forget that our hands are top
microbe transmitters.**

Hands transmit a great quantity of bacteria and microorganisms that reproduce under favorable circumstances, serve as the source of infections and are capable of causing various diseases. We cannot see bacteria and are unaware of the great number of microbes getting on our hands in various ways.

Antibacterial Lillium Natural Series is designed for protection of our life and health as the special plastic material containing silver ions provides long-lasting and effective barrier against microscopic parasites.

Silver is a natural element that has demonstrated powerful antibacterial properties. Special mechanism of reflection in the material structure is kept active due to constant air humidity and creates continuous discharge of silver ions that provide long-lasting antimicrobial effect. Because of these properties of the silver and the special plastic, the whole surface of the switch of Lillium Natural “Antibacterial” series is safely protected against bacteria; utilized materials do not deteriorate and are extremely durable.

Frequent use, temperature fluctuations and deterioration during long period of time do not decrease antibacterial properties of the material. This feature of “Antibacterial” series makes the product irreplaceable in areas where a high level of hygiene must be provided.

There are so many places for application...

- Schools
- Hospitals
- Food manufacturing industry
- Children day-care facilities
- Hotels
- Public areas
- Residential buildings

Antibacterial series were tested by the international organization “MEYER” for antibacterial effectiveness of the products and presence of protective barrier against (Staphylococcus aureus) and (Escherichia coli).
